What's in the box

1 x Full HD Webcam 1 v Hsar Manual

Product Overview

- 2. Noise Reduction Microphone
- 4. Tripod Attachment

5. Flexible Clin/base

Setting up Your Webcam

1. Place your webcam

2. Connect to your computer

Note: Make sure you are connected to the network. Note: If you can not use the camera within other apps, you will need to enable access. • Select Settings > Privacy > Camera, and then turn on Allow apps to access your camera. If you still have trouble connecting the Webcam, please refer to FAQ sections starting from Page 4.

Manual focus webcam: Depending on the distance between you and the webcam. the video signal from the webcam may not be in focus, you can spin the focus ring to adjust the lens focal length.

Auto-focus webcam: Wave in front of the camera, the webcam will automatically adjust the focus to the clearest state.

3. Video calling requirements

(1) A computer with speakers (or a headset).

(2) Install video-calling application such as Skype, FaceTime, UTP, instaVC, Zoom, Hangout, As well as a USB camera and video calling applications (both callers need): (3) Confirm your internet connection (e.g.DSL, T1 or WiFi);

4. View camera on Mac

Mac users can use the Photo Booth app, which is already installed with the OS. This will allow you to preview the camera images, capture still frames, and video clips. To begin, select the **Finder** button, click **Applications**, and start Photo Booth.

If you want to use the camera within other apps, you will need to enable access in the Mac OS Security & Privacy settings:

Go to the Apple menu in the top left corner of the screen and choose System Select the Privacy tab then choose Camera from the left side list

Locate the app you want to enable camera access for and check the box alongside that app name to enable camera access for that application. To see an image from the camera in Photo Booth, you may need to select the camera from the list of attached devices in the app.

At the top of your screen, click Camera in the app menu, and select the Full HD camera from the list of ontions

Q1: How do I know if my camera is recognized by the operating system?

A: Connect the camera in any USB 2.0/3.0 port. It will take few seconds for recognizing after the camera is connected to the laptop. To ensure the camera has installed correctly, check the Control Panel > System and Security > Device Manager.

To verify connectivity on Mac, you may click the Apple Menu (in the top left corner of your screen) and then click **About this Mac**. Click on **System Report** from the pop-up window that appears. The System Information window for your Mac will appear. Navigate to the USB Section and check if the webcam is listed as a connected device (like the photo below):

Q2: How can I use my webcam to record a video? A: For Mac OS

Please open the Photo Booth video recording application that comes with the Mac OS system to start recording video, taking photos, or testing the webcam.

There are three icon buttons of the Photo Booth: "Continuously take four photos", "take a photo" and "video recording". In photo mode, the middle button acts as a shutter button, press it to enter the photo countdown. In video capture mode, press it to start recording, press again to stop recording.

For Windows 8/10 system

Search "Camera" in the search bar of the "Start" menu, double-click "Camera" to preview. record a video and test the camera. When you need to record a better quality video, you can download and install the AMCap video recording program (download address: https://amcap.en.softonic.com/\)

If you have more than one webcam installed, or if the image does not appear immediately. open the "Devices" menu in AMCap and select "USB Live Camera" from the list. At the same time, make sure to select the microphone "USB Live Camera Audio", and select " Preview" in the "Options" tab. The video signal of the webcam will be displayed on the AMCap screen. Please do not open multiple AMCap interfaces to avoid abnormal image

Q3: What is the frame rate of video recording?

A: webcam captures crystal clear images and records a 1080p/30fps video in a well-lighted environment. Also, please ensure smooth network transmission when chatting online. The frame rate may drop to 20fps in low light condition or low bandwidth.

Q4: Why my webcam cannot record any sound? Why do I hear echoes during video calls?

A: Windows, go to Control Panel > Sound, Select the webcam as the default communication device for playback and recording.

Mac, go to System Preferences > Sound. Select webcam as the default device for sound input and output.

In your video/audio calling application, check the audio settings and make sure that the webcam is selected for both the speaker and microphone. Then, check the video settings and verify that webcam is selected for the camera.

Q5: What should I do if my Windows 7 computer says a driver is needed/ the webcam is not plug & play?

A: Because Windows 7 is end of support, your PC with Windows 7 might says a driver is needed or the device not recognized. Please test the webcam directly in Skype/ Zoom.

Q6: Why does the microphone still not work even though it is being recognized by my

A: This could mean there is a communication issue happening between the camera and your

Navigate to Computer Management > Device Manager > Sound, video and game controllers and click to expand the menu. Locate the HD Webcam USB option, right-click and select "Uninstall device".

- Software devices
- Sound, video and game controllers AMD High Definition Audio Device
- Elgato Sound Capture HD Webson ISD
 Intel(R) I Update driver
 Realtek Disable device
- Storage con Uninstall device Universal Se Scan for hardware changes Universal Se Properties WSD Print P

Once the webcam has been uninstalled, unplug the USB cord from your computer and then plug it back into the USB port. The webcam will automatically install to the new driver. Wait about 1 minute and verify if the microphone is working properly.

Q7: How can I use my webcam in chatting software, like Skype or Face Time? A: For FaceTime on Mac If your Mac has a built-in camera already, open the Face Time, click Video on the top left of your screen, and choose the name of your webcam to use it.

Face Time File Edit Video Window Help If you'd like to use the webcam's microphone, please make sure (Under Microphonesection) is selected. otherwise yournay use the Internal Microphone.

For Skype on Mac

Before running Skype, please make sure that all other applications using the webcam are closed. Failed to do so means that Skype may not recognize the webcam. It is highly recommended to update your Skype to the latest version. Once you have installed Skype and started it up, select Preferences from the Skype menu in the top left corner of your screen (like the photo below)

In the Audio/Video tab, select the name of your webcam in the Camera drop down menu.

2 Under Audio device choose the device you want

3. Click the green arrow next to Speaker to hear a sample tone, and drag the slider if you need to adjust the volume.

For Skyne on Windows 10

1. In the Skype for Business main window, click the arrow next to the Options button , and select Tools > Audio Device Settings.

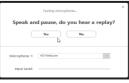

4. To test your microphone volume, speak into it for a few seconds. The volume is optimal when the progress bar reaches the middle of the test area. Drag the slider next to the Microphone to adjust the microphone volume.

If you don't hear the ringtone, use the drop-down menu or click No to switch speakers until you hear the ringtone. Click Yes to continue to the microphone test.

When you first join a meeting, Zoom will work to test your speakers automatically.

Next, Zoom will ensure you can be heard by others by testing your connected microphone. If you don't hear an audio replay, use the drop-down menu or click No to switch microphones until you hear the replay. Click Yes when you hear the replay.

Click Join with Computer Audio to finish testing and join the meeting.

Q8: Why can't I reach 1080p with my video calling applications?

A: There are various constraints on the system that could impede the ability to attain a 1080p video calling session. They center around processing power (i.e. CPU speed) and available network bandwidth. In all cases, review the requirements from the video calling application. They will guide as to the system performance required as well as the necessary bandwidth.

For manual focus webcam, please gently rotate the lens ring until it clear. For autofocus webcam, please wave your hand in front of the webcam, it will adjust the focus

Q9: Why is there flickering or banding on the video feed when I use the webcam? A: This might be due to lighting inconsistencies in your room. To resolve this, open the video control panel of your video capture software and change the frequency response rate to either 50Hz or 60Hz, depending on your region.

The camera defaults to indoor mode. Please do not aim the camera at the light source directly.

Q10: What can I do if the image shows abnormal color?

Please download PotPlayer software on your computer and add this camera to it.

While use this camera to stream video on the PotPlayer, click the Setting button then adjust the Brightness or other image settings. Then you can use another software to start video call.

Q11: Does my webcam support Linux system?

A: The Linux system is supported if your Linux has UVC drive-free protocols. Otherwise, you have to install Linux UVC driver manually.

Q12: What should I do if photographed pictures are subjected to color cast?

A: Please ensure that the light environment is free of unique tone or intense light, such as walls, floors and other large-area non-standard light environments of green/blue/intense light. In such environments, photographed pictures are certainly subjected to color cast due to their impacts.

The video application is disordered or if you use a virtual application such as Chromacam and use another video application, please restore the default value.

Q13: What's wrong if the screen goes blank or black during local previewing of images? A: The reasons of this issue may as follow:

- If the camera you choose is provided with H.264 encoding, as PC systems are generally not supportive of H.264 decoding, the screen would go blank or black when previewing is conducted using the previewing software (e.g. AMCap) which is not supportive of H.264 decoding; please download a video previewing application supportive of H.264 decoding.
- There is something wrong with the USB port; please change a USB port or another
- The PC does not recognize the camera device.
- The operating system and computer configuration do not satisfy the requirements of the camera
- . The video preview feature of the application is not turned on, or the privacy feature prohibits access to the camera.

Q14: How to adjust my image parameter, such as brightness or contrast?

Click Settings, select Audio & Video, then click Webcam settings.

You can adjust any image parameter you want according to different usage environments.

Click Option, select Video Device, then click Properties.

You can adjust any image parameter you want according to different usage environments.
